Application/Control Number: 10/572,852

Art Unit: 1725

1. Claims 1-9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, line 6, the expression of "the billet **may** have a compression ratio ----" is considered to be indefinite since it is not clear what scope is claimed.

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 4. Claims 1, 3-6, 8, and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over either US 2001/0039710 to Nakao et al. or JP 2002-66724 (applicant's admitted prior art as set forth in page 2 of the specification) to Tanaka et al and further in view of US 4,473,103 to Kenney et al.

Application/Control Number: 10/572,852

Art Unit: 1725

Each of the primary reference substantially shows the invention as claimed except that they do not prepare the composite billet by mixing the reinforcing material and the molten metal matrix material. However, Kenney et al. show that it is conventional to prepare composite article continuously by mixing the reinforcing material and the molten metal matrix material and then solidify the mixture to form the same. Thus, the use of mixing technique in lieu of infiltration technique presents no novel or unexpected result and solves no stated problem and would have been obvious to those of ordinary skill in the composite article making art, *In re Kuhle*, 188 USPQ 7.

5. Claims 2 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over either US 2001/0039710 to Nakao et al. or JP 2002-66724 to Tanaka et al and further in view of US 4,473,103 to Kenney et al. as applied to claim 1 above, and further in view of JP 2-220760 to Ishizuka.

Ishizuka shows to provide a billet having a height varying from one portion to another. Thus, the configuration or shape of the billet in the primary references depends on the technique of preparing the billet. It would have been obvious to provide the billet of Ishizuk in the process of the primary references if the billet were prepare with the process of Ishizuk.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kuang Y. Lin whose telephone number is 571-272-1179. The examiner can normally be reached on Monday-Friday, 10:00-6:30,.
